

Sample products

Flange bolt

Because of the large flange surface, it has the effect of preventing damage to the components used, as well as preventing the loosening of the bolt.

Stein Flange Bolt

The component can be moved by holding the component with the length of the step part.

Weld bolt & nut

It is a bolt that has protrusions on the seat surface and welded to the steel plate. The shape of the protrusion is spherical type, mountain type etc.

Caulking pin

To caulk the tip and fasten the two components together. It will speed up the work of making holes. The product design then can be simplified.

Long bolt & pin

The thread length can be adjusted up to 150 mm.

Special shape bolt

According to customer's original drawings, we will manufacture special (irregularly shaped) Shaped Bolts.

Serrated bolt & pin

When attaching the bolts and pins to the board with the Serration. It is then possible to join high-strength bolts and pins and thin plates that can not be welded

Scotch grip holding

When the glue in the microcapsule and the surface of the screw is tightened together. Microcapsules will tear. The locking and gluing effect of the adhesive is indicated to prevent vibration and impact.
